

Freetown – June 2021

Eversource held a call with the group members June 7th to discuss the results of the steady state analysis and has provided the presentation to customers. Eversource is working on the development of the base case PSCAD models which require updates to reflect the results of the steady state analysis.

Eversource's intention is to keep all customers regularly informed (at least monthly) on the progress and discuss any significant risks or concerns Eversource encounters during the analysis. Factors that may impact the completion schedule and associated activities include but are not limited to: base case modeling issues; DER stability model issues; solution development for potential adverse system impacts; and/or significant Member Impact changes requiring review.

Eversource expects to provide final study results to customers this Fall.
